

Thursday, April 25, 2013

This afternoon Avrie observed a bird on top of a light on the bike playground. Slowly, other Villagers began to notice the bird as well. A second bird was observed flying back and forth to the light as well. Ms.Sara wrote down some of our observations of the birds.

Avrie – I seen these birds doing something in a nest. They might need a little shade. I saw two birds. The dad is going back and forth to look for worms or pine straw for the mama. She might be sorting things out. She might be having babies.

Megan – I saw the mama spread her wings.

Ella – I see that it's sitting down. I think it just laid eggs, and is sitting on the eggs.

Avrie – When the bird was flying it looked like peacock birds. (Referring to the bird's tail)

At 1:11 we observed that the bird that had been in the nest was not there. Soon, one of the birds returned with a “pine needle” (Ella) in its beak. It sat near the nest and looked around.

We are not sure why the bird on the nest left or if it will come back. Perhaps a playground is too noisy for a bird family? We will continue to observe and see if the birds return tomorrow.
